# Our Moon

By Cynthia Sherwood

**J**upiter and Saturn have more than ninety moons each. Neptune has fourteen. Mars has two. But if somebody says “the moon,” we know exactly what they’re talking about. It’s Earth’s moon, our closest neighbor in outer space.

..... minus 250°F.

..... That’s why astronauts  
..... had to wear special space suits when  
..... they first landed on the moon. Besides  
..... protecting them from the extreme  
..... temperatures, the suits provided enough  
..... oxygen for the astronauts to breathe.

sliver called a “crescent.” Later, it becomes a glowing full moon. These phases are caused by the changing angles of where the Earth, moon, and sun are relative to one another.

Astronaut Edwin E. Aldrin Jr.

Armstrong. Right afterward, he said some of the most famous words ever: “That’s one small step for man, one giant leap for mankind.”

The moon might be the closest thing to us in space, but it’s still far, far away—about a quarter of a million miles away! It’s also much smaller. About fifty moons could fit inside Earth. Temperatures can be extreme—as hot as 250°F or as cold as

..... You might ask  
..... your parents, grandparents, or teachers  
..... where they were when we first landed on  
..... the moon. If they were born and weren’t  
..... too young, they’ll remember. Life has  
..... never been quite the same here on Earth  
..... now that we’ve explored our closest  
..... neighbor in space.
